

# Unified Clinical & Operational Intelligence for Multi-Site Groups.

<b>6</b> Integrated capability pillars	<b>25+</b> Clinical & operational features
<b>1</b> Unified platform — all sites	<b>Multi-Region</b> Proven across MENA & beyond

## PLATFORM CAPABILITY OVERVIEW

*Six integrated pillars. One connected platform.*

 <b>Group Features</b> Common EMR · Lab · Inventory · Claims · Reporting · Referrals	 <b>Physician Assistance</b> Configurable EMR · AI-Doctor's clinical assistant · Speech-to-text · Vidal · Remote access	 <b>Patient Engagement</b> Patient portal · Self-booking kiosks · Post-visit care continuity
 <b>Data Analytics</b> AI analytics · CEO Dashboard · Live group insights	 <b>Integrations</b> HL7 · DICOM · API · CRM · HRMS	 <b>Security &amp; Privacy</b> Cloud deployment · Bank-grade security · Role-based access control

## PLATFORM CAPABILITIES IN PRACTICE

What changes *the day you go live.*

- ✓ One complete patient record opens at any site — no duplication, no gaps, no re-registration
- ✓ Lab and imaging results flow straight into the right record the moment they're ready
- ✓ Stock is visible across every site — emergency procurement becomes a thing of the past
- ✓ Patients self-book at kiosks across all sites, with automated reminders cutting no-shows
- ✓ One claim desk for the whole group — fewer rejections, faster reimbursement
- ✓ The CEO Dashboard shows live performance across every site, updated continuously
- ✓ Post-discharge follow-up runs automatically, keeping patients engaged

### Built for Multi-Region Networks

Proven across MENA and international deployments. Multi-language support — including full Arabic — and regional compliance are built in as standard, so you scale into new markets without re-engineering.

### Clinical Intelligence, Built In

AI-led Doctor's clinical assistant, Speech-to-text and Post-visit care continuity are native components — running on a structured clinical data layer that powers real decision support from day one.

### Open Integration Architecture

Standards-based connectors for your existing HIS, ERP and imaging platforms. Current technology investments are preserved and extended — never ripped out and replaced.

### Hosted & Maintained Centrally

Security, uptime and capacity are managed centrally — freeing your clinical and IT teams from infrastructure overhead entirely.

“ *A single source of truth across the network provides leadership with the comprehensive visibility required for **well-informed decision-making.*** ”
