

AI Analytics Dashboard

EXECUTIVE INTELLIGENCE · AI-POWERED ANALYTICS

Every metric. Every department. *Every single day.*

An AI-powered analytics layer over your current HMS. Ask any question about hospital performance in plain language — revenue, collections, patient volumes — and get an instant answer. On the dashboard, in a PDF, or on WhatsApp.

THE CHALLENGE —

What leadership should never wait for, *its own numbers.*

Hospital systems have never lacked reports — standard MIS packs, registers, and statements answer the routine questions well. What they cannot answer is the next question: the one that arises in a meeting, framed in plain business language, and needed at that moment. That is the gap this dashboard closes — AI-driven, on-demand analytics over your existing HMS data.

CHALLENGE

Conventional reporting is pre-defined. Each report answers a fixed question in a fixed format — and every new question becomes a request routed through IT or an analyst.

GAP

Between scheduled reports and ad-hoc requests sits the executive's real need: immediate answers, asked in natural language, available at the moment of decision.

COST

Decisions deferred to the next reporting cycle, receivables that age between reviews, and exceptions that surface only after they have carried a cost.

HOW IT WORKS

Hospital performance, answered. *The moment it is asked.*

Natural-Language Querying

01

Ask any performance question in plain language and get the chart instantly. Recent queries stay available as shortcuts.

Unified Filtering

02

One slicer bar drives every chart — period, department, patient type, billing type, doctor, and custom date ranges.

Live Executive KPIs

03

Revenue, collections, AR, patient volumes, and revenue per patient — each with prior-year variance, recalculated as filters change.

One-Click Flash Report

04

One click turns the active filters into a hospital-branded PDF of KPIs and charts — ready for the board, no analyst needed.

Data Privacy & Security

05

Works within your existing HMS security and governance — no new compliance posture. AI and WhatsApp use aggregated data; patient-identifying information stays out of scope.

EXECUTIVE CAPABILITIES —

What It *delivers.*

AI SEARCH & PINNED CHARTS

Natural-language questions answered with charts drawn from live HMS data. Any AI-generated chart can be pinned to My Charts, where it persists across sessions until unpinned.

EXECUTIVE KPI CARDS

Total revenue, cash collection rate, insurance AR pending, outstanding AR, total patients, IP and OP encounters, and revenue per patient — each with prior-year variance.

OPERATIONS COMMAND VIEW

Earnings split by OP, IP, and WIP. Ward-by-ward admissions, discharges, and active inpatients. Pharmacy, laboratory, and radiology throughput by modality — one page, one date range.

REPORT STUDIO

Template-driven PDF reports by month and year. A custom builder with full filter control and live preview — every chart and table reviewed before download. Delivery can be scheduled.

WHATSAPP 2-WAY ACCESS

A direct chat line to hospital data — no browser required. A single keyword returns the day's position to your phone, with the option to expand any answer into a full table.

AUTOMATED ALERTS

Thresholds monitored continuously across hospital data. The moment one is breached, the alert surfaces in the dashboard and is delivered to WhatsApp — the most critical flagged first.

EXECUTIVE & OPERATIONAL OUTCOMES

What Changes *from day one.*

Live

DECISION ON CURRENT DATA

Every KPI carries its prior-year variance. No waiting for compiled MIS packs — the dashboard is the report.

Auto

REPORTING ON AUTOPILOT

Templated, scheduled, hospital-branded PDFs — the month-end pack is generated and delivered automatically.

Alert

EXCEPTIONS FIND YOU

Threshold breaches surface immediately in the dashboard and on WhatsApp — before they compound.

A Day With The Dashboard — The Executive's View

08:00

On WhatsApp

"revenue" returns the day's invoiced revenue, split IP and OP, with patient count — before the first meeting, from the phone.

11:30

In the Boardroom

A question arises mid-discussion. Ask AI returns the chart in seconds — pinned to My Charts for the follow-up review.

Month-end

On Schedule

The templated performance report is generated and delivered automatically — consistent, branded, and filtered exactly as configured.

— REQUEST A DEMO

See it in action

Demonstrated at your scale.

A live demonstration on a facility of comparable scale — departments, payer mix, and patient volumes representative of your own.

WHAT THE DEMO COVERS —

- Ask AI — live natural-language queries with instant charts
- Flash Report generation against the active filters, in one click
- WhatsApp walkthrough — revenue, collections, and alerts from your phone

Executive intelligence, on the platform you already run.

A Medinious product that works with your existing HMS — no rip-and-replace.

CONFIGURED TO YOUR FACILITY

Aligned to your departments, billing types, and reporting periods. Scales from 50 to 500+ beds, single-site or multisite.

NO NEW INFRASTRUCTURE

Works with your live HMS data — no migration, no parallel system.

ACCESS, GOVERNED

Executive views and alerts follow your existing access controls.
